

Complexity Made Simple

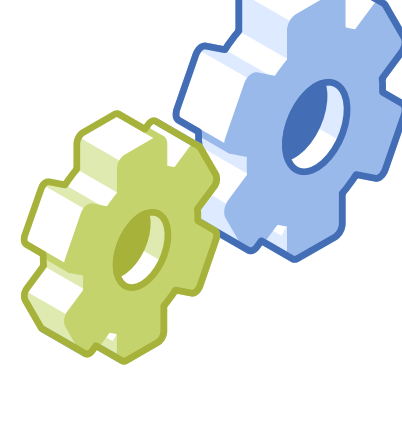

Database Infrastructure and Management
with HPE GreenLake and Nutanix Era

Understanding Your Database Challenges

Overstretched

- Complex and manual database operations lead to errors and delayed deployments
 - Outdated infrastructure leaves databases struggling to meet modern performance demands and business needs

Overloaded

- Database sprawl leads to a database management nightmare, costing DBAs massive overtime
- DBAs lack skill sets for Backup and Disaster Recovery that can result in costly downtime

Overburdened

- Maintenance tasks like patching and upgrades require downtime for applications and users, costing productivity
 - DBAs unable to keep up with database patches and updates increase database vulnerability

Power Up Your Databases for Stronger Business Performance

Consumption-based Database Infrastructure
from HPE GreenLake and Nutanix

Simplify

management and increase productivity
by focusing on what matters

66%

reduction in administrative
efficiencies with DBaaS ³

87%

simplification in database
administration tasks ³

Satisfy

business needs and keep the
business running optimally

5x

database performance
improvement ¹

5x

analytics performance
improvement ²

Slash

database infrastructure costs with expanded
freedom of choice in deployment model

62%

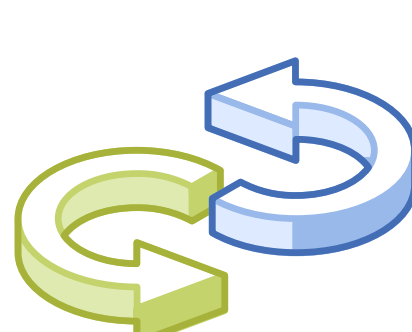

reduction in database
operational costs ³

6x

reduction in storage costs
with zero byte cloning ³

Complexity made simple, with consumption flexibility

HPE GreenLake with Nutanix Era Delivers the Outcomes your Business Demands

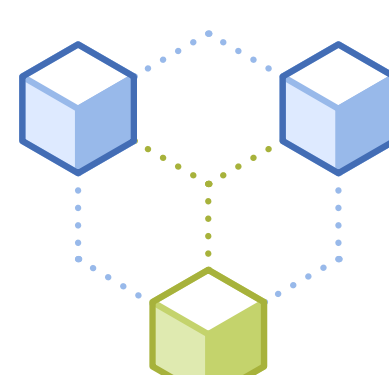

Outcome-based Consumption Drives More Business Agility

Buffered capacity ahead of demand. Active capacity metering and management.

Managed For You, So You Can Fuel Innovation

Offload 'heavy lifting'. Takes on routine IT tasks to free up staff.

On-premises Control With The Benefits Of Cloud

Choose your deployment model. Deliver greater performance.

Better Economics For Financial Simplicity And Clarity

Reduce overprovisioning. Pay only for the services you use.
